

Teledyne RESON and Teledyne PDS Open Courses

Teledyne RESON announces a series of SeaBat and Teledyne PDS training courses. The open courses at different global locations cover Teledyne PDS for dredge or multibeam operations and SeaBat training.

According to global training manager, Pim Kuus, Teledyne is offering a lot of training at users' request throughout the year aside of the open [Teledyne RESON and PDS Training](#). The training is then tailored towards the user's specific setup or workflow. A dedicated support team at each global office allows Teledyne RESON to reach out locally for support or training.

Teledyne PDS and Teledyne SeaBat Multibeam Sonar are widely used for many seabed mapping and dredging operations. Due to the popularity of the SeaBat and Teledyne PDS, there's also a combined training session including everything users need to know from SeaBat installation to producing a deliverable in Teledyne PDS.
