

Transas equips Brazilian Navy training vessel

Transas has successfully installed the Navi-Sailor 3000 ECS onboard the Brazilian Navy's 3,168 tons training vessel U-27 BRASIL.

The Navi-Sailor 3000 ECS, a Transas Marine electronic chart navigational system, will be used to support navigational activities. The equipment set onboard also comprises World Folio ZR00, worldwide chart coverage, providing the vessel with access to more than 10,000 vector charts with ports indicated worldwide.

Another state-of-the-art solution installed is Navtex Manager, which is capable of automatically reading and processing Navtex messages; extracting co-ordinates, areas, transmitting station and other parameters; saving messages onto the hard disk and displaying the message mark on the electronic chart.

The Transas Weather Wizard application also has been implemented to receive weather forecasts by mail. All information will be overlaid on the nautical charts to support navigational planning.
