

Trident Offshore Positioning Contract

Trident Offshore have commissioned Veripos to provide a full range of precision GNSS positioning services and associated support under an exclusive five-year global contract. The agreement calls for Veripos to provide its complete range of proprietary satellite positioning services extending from its Standard GNSS augmentation service to its Ultra decimetre-accuracy Precise Point Positioning (PPP) capability.

Additionally, Veripos will also provide its range of LD2 and LD3 integrated GNSS receiver and demodulator mobile units together with user-configurable Verify-QC software packages for real-time assessment and post-processing of data as well as support of both

single and multi-reference station calculations.
