

Triton Elics HydroSuite for Indonesia

Triton Elics International (TEI) has installed a TEI HydroSuite aboard the Cinta Laut, a survey vessel managed by Departemen Kelautan dan Perikanan (DKP), the Ministry of Marine Affairs and Fisheries for Indonesia. The TEI Hydrosuite provides DKP with a single-point source for all hardware, software and support for multi-beam acquisition and processing of SM2000 multi-beam data. The TEI suite of software includes IsisBathy, TargetPro, BathyRT, BathyPro, DelphMap and DelphNav. Mr Harold Orlinsky, Hydrographic Systems TEI VP, assisted the DKP with final system configurations and provided hands-on training for all scientists and technicians associated with the project.
