

Two Edgetech 6205 Echosounders for Survey Equipment Services Katy

Survey Equipment Services Katy, TX, USA, is adding two Edgetech 6205 echosounders to its rental fleet. These devices represent the next generation of bathymetric technology for shallow water hydrography and benthic mapping. With EdgeTech's™ enhanced bathymetry capability and a lightweight packaging, the 6205 offers unprecedented resolution and precision measurement of the sea floor with co-registered, simultaneous dual-frequency sidescan imagery.

The 6205 is a combined bathymetry and dual-frequency sidescan system with no nadir gap. The device incorporates a 10-element receiver and unique technology and software to enable 200° swath coverage and superior multi-path rejection.
