

UKHO Digital Chart Developments at SMM

The United Kingdom Hydrographic Office (UKHO) will highlight the most recent developments to its new Admiralty Vector Chart Service (AVCS) at SMM Hamburg 2008. UKHO will also launch the Admiralty WebChart Service (AWCS), which enables shore-based users to view Admiralty charts instantly over the internet.

AVCS integrates official electronic navigational charts (ENCs) from national hydrographic offices across the globe to provide a comprehensive world series for the international mariner.

Visitors to the UKHO stand will be able to view an AWCS demonstration every day at 1100 hours.

As well as having their own dedicated presence in Hall B6, stand number B6.184, the UKHO will exhibit with a number of partners from its distributor network during the international trade fair.
