

# UKHO Hydrographic Database Solution

EDS, as a prime contractor, and CARIS, as the sub-contractor have been selected for the United Kingdom Hydrographic Office (UKHO) Hydrographic Database (HDB) Project. Through the HDB Project, EDS and CARIS will merge Workflow Management technologies together with Bathy DataBASE and Hydrographic Production Database (HPD) software to manage and create paper and electronic chart products. This will lead to an enterprise production environment where multiple products are created and updated from a centrally managed source.

The United Kingdom is the nineteenth nation to adopt HPD in their hydrographic production workflow, indicating further industry acceptance of CARIS's™ unique database-driven approach to data management and production.
