

UKHO Release First Russian ENC Cells

Russian Electronic Navigational Charts (ENCs) are now available to shipping companies via the UKHO's Admiralty ENC and ECDIS Services. These new ENC cells form part of a comprehensive scheme of coverage planned for release via the UKHO over the coming months.

The first cells released provide port and approach scale ENCs of Tuapse in the Black Sea. Additional ENCs of the Black Sea, Sea of Azof and Caspian Sea are expected to be released in the coming weeks and a further 70 cells of the North Russian coast will be released mid year.

Accessibility for customers is available through the UK Hydrographic Office's™ worldwide channel of authorised distributors.
