

Ultraheavy-duty ROV Sales

Schilling Robotics has sold two additional Schilling UHD ultraheavy-duty hydraulic ROVs to Geoconsult AS of Bergen, Norway, for delivery in March 2006. This order followed quickly upon Geoconsult's initial September order for two UHD systems. Like the first systems ordered, these additional systems will feature 150shp and can operate at depths up to 4,000 meters. The systems will be delivered with features including Schilling's new Digital Telemetry System, automatic control functions such as StationKeep, and Schilling's new XE hydraulic TMS, with over 800 metres of tether. Geoconsult has also taken an option for four additional UHD systems.
