

# Underwater Navigation Training

Teledyne RD Instruments (USA) will host a two-day training seminar focused on their Doppler Velocity Log (DVL) technology. This training will be hosted in Houston, USA, on 21 and 22 October 2014.

DVLs are used extensively onboard underwater platforms and surface vessels to provide precision navigation capability. All current and potential DVL users are encouraged to [attend this event](#) to expand their working knowledge of their DVL and its application to their underwater platform.
