

# US Naval Academy Purchases VideoRay Underwater Robots

VideoRay announced today that the US Naval Academy in Annapolis, MD, has purchased two VideoRay Pro III remotely operated vehicles, each identically outfitted with a SeaSprite scanning sonar, extension tether, training, 15-inch picture-in-picture monitor and manipulator arm valued at over US\$75,000.

The VideoRay will be used in Midshipman education, ocean engineering coursework and labs, and faculty research, according to Commander William Marr, Ph.D., P.E., of the Naval Architecture & Ocean Engineering Department at the US Naval Academy. The VideoRay replaces two ROVs that were destroyed in Hurricane Isabelle, which swept through Annapolis, Maryland, last September.
