

UTM Consultants Aims to Build Subsea Talent Network

A new UK-based company aiming to address the immediate and long-term skills needs of the global marine energy sector, was launched on 10 July 2017. Headquartered in Cornwall, South West England, UTM Consultants will leverage its network together with its industry experience to source and supply the manpower solutions required to deliver complex ROV, survey, inspection, repair and maintenance projects to the oil and gas, renewable, hydrographic, marine, power and telecommunications sectors. The company has also established an onshore support team to provide help and guidance to contractors throughout their career.

Founded by managing director, Richard Tozer and operations director, Alex Meeks, the privately funded company will specialise in the acquisition and deployment of highly

qualified and accomplished professionals from a range of technical and engineering disciplines.

Prior to setting up UTM, Richard ran a marine recruitment services company, GOSS Consultants before selling the business in 2013. Alex has extensive experience in sourcing personnel for the offshore sector, having previously led the survey division of an international survey and ROV recruitment firm.

By concentrating exclusively on very niche industry disciplines, UTM Consultants aim to source and secure the right talent to fill the most critical roles firms need to sustain growth within the marine and renewable industries.
