

# Versatile Electronics Package

Kongsberg Maritime has signed a contract with Norwegian shipyard Flekkefjord Slipp & Maskinfabrikk to supply equipment and services for a new research vessel currently in production for the British organisation Natural Environment Research Council (NERC). In many ways the new vessel is similar to the modern, well-equipped G.O. Sars owned by The Institute of Marine Research in Bergen, Norway and built by Flekkefjord Slipp & Maskinfabrikk in 2002/2003 with almost the same equipment as that featured in the new contract. The NERC research vessel will utilise the following Kongsberg products.

Dynamic Positioning (SDP 11)

- Automation (SVC 400)
- Marine Data Management system (MDM 400)
- Synchronisation unit (SSU)
- Post-processing software and hardware
- Sub Bottom Profiler (SBP 120, 3°)
- Deepwater Multi-beam Echo Sounder (EM 120, 1x1°)
- Precision Echo Sounder (EA 600)
- Wide-band Multi-beam Echo Sounder (EM 710)
- Scientific Echo Sounder (Simrad EK60).
