

Vessel and Voyage Optimisation Program

Jeppesen Marine is offering a 45-day trial and evaluation program to introduce prospective customers to the Vessel and Voyage Optimization Solution (VVOS). VVOS empowers masters and shore-side managers to develop optimised passages while managing vessel speed, fuel consumption, schedule integrity, seakeeping and environmental conditions.

Jeppesen Marine's patent-pending Hindcast Analysis is included as part of the no-cost, no-risk VVOS trial. Key performance indicators (KPIs), such as fuel conservation, cargo loss reduction, vessel damage, motion reduction and schedule integrity are selected to match each customer's operational objectives. Jeppesen Marine then prepares a final report documenting the trial results for each KPI and calculates the cost savings to the prospective buyer.
