

Water-Tight Cases

B&D have unveiled their latest range of water-tight cases. The Zarges K470 aluminium container has been re-developed to Ingress Protection (IP) 65 protecting its contents against the penetration of liquids and dust.

Zarges' engineers developed the cases with TÜV formally certifying the range. The new models include additionally applied internal sealing, an automatic membrane relief valve, improved lid and location stability.

Aluminium cases combine light-weight ease of manoeuvre with unrivalled strength and impact resistance. Effectiveness in protecting against water penetration joins the containers' robust protection against extreme fluctuations in temperature from -150 to +150°C.
