

# Wave Energy for La R  union

A commercial-scale CETO wave energy generation unit is to be deployed on the French territory of La R  union, about 600m offshore between A  roport de Pierrefonds and Pointe du Diable. Carnegie (Australia) is working with the first CETO licensee and joint venture partner EDF Energies Nouvelles (EDF-EN).

This single CETO 4 unit deployment has been partially funded by a French Government grant of USD5 million and is the first stage of a larger planned CETO Project. This expected to be followed by Stage 2 in which the project would be expanded to a grid connected 2MW array with a further Stage 3 of 15MW planned.
