

# World Wave and Tidal Market

The World Wave & Tidal Market Report is a new report published by Douglas-Westwood focusing on the current and future prospects, technologies and markets for the wave and tidal current stream sectors. The agency foresees a great leap in the worldwide use of wave and tidal energy during the next four years.

The wave and tidal sectors are currently characterised by a large number of concept devices. An increasing number of these technologies have attracted investment and progressed to full-scale prototype testing. The first commercial projects are now appearing online. This emerging industry offers potential to investors seeking to build or expand their renewable portfolio, as well as for supply chain companies. The World Wave & Tidal Market Report is aimed at executive readers. The report does not assume detailed technical knowledge of the subject.

The report provides an illustrated review of different technological concepts and devices employed in both existing and future projects. The report provides analysis of the impact of current and new technologies on the industry and identifies the key players in the business.

## Market forecasts

Using the same modeling process that is adopted for other reports, the report presents worldwide market forecasts for both sectors for the 2009-2013 period. Five years historic data is included for comparison.
