

Maritime geomatics software solutions

For clients who demand the best.

# From ship to shore, know your ocean.

QPS provides stable, powerful software for streamlined workflows. From hydrographic data collection to piloting, whatever you need, QPS can provide the support and tools to match.

OUR PILLARS

### Reliability

With industry renowned stability, we keep the job running smoothly.

### Capability

We provide the most powerful tools on the market, and we can meet almost any requirement.

### Flexibility

Our software packages can be easily integrated into almost any workflow.

## Survey and navigation. Ping and done.

Qinsy is a survey planning, acquisition, and real-time hydrographic data processing solution, with capabilities to handle any job, from simple single beam surveys to complex offshore construction works.

ACQUIRE

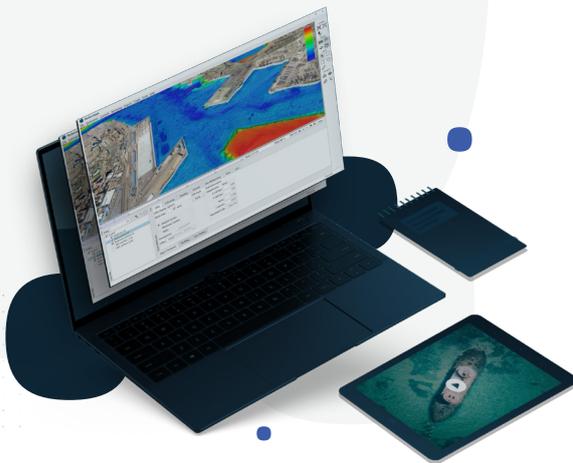

QPS.

## Multibeam processing. It's that easy.

Qimera makes hydrographic data processing as intuitive and as simple as possible, while still offering the most advanced and cutting edge tools to ensure high quality products and rapid delivery.

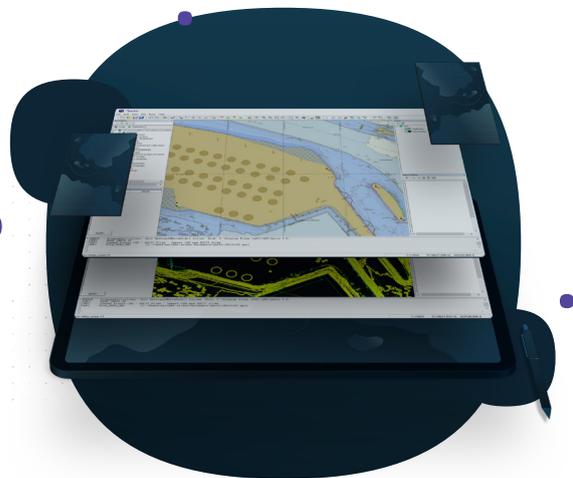

PROCESS

## 4D geospatial analysis. More than just a pretty picture.

Fledermaus is an interactive 4D geospatial analysis software. With movie-making tools and integrated video playback, it is the gold standard for presentation and communication.

ANALYZE

## Bathymetric ENC production. Maximise navigable waters.

Qarto is an ENC production platform to rapidly create and update existing ENCs with high resolution bathymetry. It is the tool of choice for the largest ports in the world to increase port availability.

MAP

## Precise piloting. Let us guide you.

Qastor is a precise navigation software for piloting and docking. With under-keel clearance capability and real-time information updates, it is the ultimate in maritime safety.
